How Talalay Latex Helps You Sleep? Earth's Most Perfect Sleep Material™

Talay Latex is the premier material in bedding. It delivers a unique buoyant quality which relaxes muscles & relieves tension, lifting away the pressures of the day.

It's important to know that not all latex is created equal!

Talay and Dunlop are the two processes used in mattress production. The Talalay process was developed in World War II. The Talalay process is significantly more complex & costly, but produces softer, more buoyant & luxurious finished products.

The Talalay process takes 4x longer than Dunlop with two additional process steps—vacuum and flash freezing—which improve the consistency, quality & feel of the finished latex.

Only the best pass our tests. Every single bed goes through compression and impact tests to ensure durability and consistency.
